3A PVE Single Seat Valves

MaxClean Single Seat Valve for Sanitary Applications (Pneumatic / Manual Operation)

PVE valves are available in three configurations: pneumatically actuated, pneumatically actuated with an integrated electronic control top, and manually operated. These valves are commonly used in applications such as shut-off, divert, bottom tank outlet, and pressure relief.

Connection types include clamp and weld ends. Manufactured from AISI 316L stainless steel, EGMO's PVE valves comply with all 3A sanitary standards and are available in sizes ranging from ¾" to 4". The design features a unique, patent-pending sealing system.

3A PVE Features and Benefits

Standards

Robust and Durable

- ✓ The valve's unique design protects the O-ring from wear and contact with abrasive media, enhancing service life.
- ✓ Constructed from solid bar AISI 316L stainless steel for superior durability and optimal cleanability.
- ✓ Engineered with a heavy-duty design for demanding applications.

Smart Installation and Operation

- ✓ 360° adjustable actuator enables flexible installation in various configurations.
- ✓ Operation mode can be optionally switched from Normally Closed (NC) to Normally Open (NO).
(Refer to the Installation and Service Manual for details.)
- ✓ Suitable for shut-off, divert, and vessel outlet applications.
- ✓ One-piece stem design ensures optimal sterility.
- ✓ Internal surface finish of $\leq 32 \mu\text{m Ra}$ for hygienic performance.
- ✓ Complete drainage design with no dead legs.
- ✓ Optional proximity switches can be installed by the customer.
- ✓ Weld ends are compatible with both manual and orbital welding techniques.

Optimal CIP (Clean-In-Place) Cleaning

- ✓ Spherical body design and smooth surfaces eliminate dead spaces, ensuring thorough cleaning.
- ✓ O-ring is securely seated within the valve to minimize exposure to the process media.

Cost-Effective Maintenance

- ✓ Top and bottom valve components are identical (except for 3/4" and 1" sizes), reducing spare parts inventory and simplifying maintenance.
- ✓ Features a unique, patent-pending sealing system that uses standard O-rings for easy and economical replacement.

NC and NO Operation Modes in a Single Actuator

- ✓ **Normally Closed (NC):** The valve remains closed when de-energized and opens when power is applied.
- ✓ **Normally Open (NO):** The valve remains open when de-energized and closes when power is applied.
- ✓ **This dual functionality is made possible by the actuator's mounting position**, rotating the actuator (e.g., 180°) changes its default operation from NC to NO or vice versa.

Features and Benefits

- ✓ **Versatility:** A single actuator can be configured for both NC and NO operation, reducing inventory requirements and increasing design and installation flexibility.
- ✓ **Cost Efficiency:** No need to stock or specify separate actuators for different operation modes, streamlining procurement and lowering maintenance costs.
- ✓ **Simplified Maintenance and Installation:** Standardizing on one actuator design minimizes training needs and the risk of installation errors.
- ✓ **Fail-Safe Capability:** Configurable fail-safe positions enhance safety and support compliance with process regulations.

3A PVE - Shut-off Valve

Designed for Opening and Closing the Fluid Path

- ✓ Spherical body design ensures zero dead leg for optimal hygiene.
- ✓ Simple maintenance with easily replaceable standard O-rings.
- ✓ Quick and easy switch between NC and NO fail-safe positions.
- ✓ Clamp connection between valve components allows easy assembly and disassembly.
- ✓ Available with butt weld or clamp end connections.
- ✓ Minimal gasket exposure reduces the risk of contamination.
- ✓ Visual bleeding hole enables easy leak detection.
- ✓ Hygienic design suitable for sanitary applications.

3A PVE - Divert Valve

Designed for Opening, Closing, or Diverting the Fluid Path

- ✓ Spherical body design ensures zero dead leg for maximum cleanability.
- ✓ Easy maintenance with standard O-ring replacement.
- ✓ Quick and simple conversion between Normally Closed (NC) and Normally Open (NO) fail-safe positions.
- ✓ Clamp connection between valve components allows for easy disassembly and reassembly.
- ✓ Available with butt weld or clamp end connections.
- ✓ Minimal gasket exposure to reduce contamination risk.
- ✓ Visual bleeding hole allows for easy leak detection.
- ✓ Hygienic construction suitable for sanitary environments.
- ✓ Internal surface finish of $\leq 32 \mu\text{m Ra}$.

N/C or N/O operation mode in one actuator

Quick Disconnect Coupling
(Optional)

Minimal exposure of the O-ring to the flow

Robust, ball-shaped body made of AISI 316L stainless-steel (made from full bar)

Optimum CIP cleaning due to ball shape and surfaces - no dead spaces

Static O-ring to minimize wear and erosion

1.	PVEP-1-NC-(NO)-¾ & 1.0	Actuator is reversible for normally open or normally closed
	PVEP-1-NC-(NO)-1.5 & 2.0	Actuator is reversible for normally open or normally closed
	PVEP-1-NC-(NO)-2.5 & 3.0	Actuator is reversible for normally open or normally closed
	PVEP-1-NC-(NO)-4.0	Actuator is reversible for normally open or normally closed
2.	PVEP-2-ALL	Air Inlet
3.	PVEP-3-¾ & 1.0	Fastening Bolts
	PVEP-3-1.5÷3.0	Fastening Bolts
	PVEP-3-4.0	Fastening Bolts
3A.	PVEP-3A-¾ & 1.0	Washer for fastening bolt
	PVEP-3A-1.5÷3.0	Washer for fastening bolt
	PVEP-3A-4.0	Washer for fastening bolt
4.	PVEP-4-ALL	Quick Disconnect Coupling (Optional)
4A.	PVEP-4-1.5÷3.0	Stem Coupling
	PVEP-4-4.0	Stem Coupling
5.	PVEP-5-¾ & 1.0	Bonnet & Yoke for ¾" & 1"
	PVEP-5-1.5	Bonnet & Yoke for 1½"
	PVEP-5-2.0	Bonnet & Yoke for 2"
	PVEP-5-2.5	Bonnet & Yoke for 2½"
	PVEP-5-3.0	Bonnet & Yoke for 3"
	PVEP-5-4.0	Bonnet & Yoke for 4"
6.	PVEP-6-4.0	Upper ring seal

3A PVE - Pressure Relief Valve (Overflow Valve)

The primary function of a pressure or vacuum relief valve is to protect both personnel and equipment by either venting process fluid from an over-pressurized vessel or introducing fluid or gas (such as air) to prevent vacuum conditions that could lead to the collapse of a storage tank.

- ✓ Functions as a pressure relief valve, with the option for full valve opening via pneumatic actuation.
- ✓ Commonly used as an overflow valve for automatic CIP processes or bypass applications.

Pressure Relief Valve - Key Properties

- ✓ Operating pressure range: 2-7 bar
- ✓ Pneumatic opening pressure: Minimum 5 bar - Maximum 7 bar
- ✓ Materials of construction:
 - Actuator: AISI 304L stainless steel
 - Valve body: AISI 316L stainless steel
 - Gaskets: EPDM or Viton
- ✓ Internal surface finish: $\leq 32 \mu\text{in Ra}$
- ✓ Factory calibrated to a specific pressure as per customer requirements**

How To Order Pressure Relief Valve

E	G	P	V	E	-	RELIEF	-	2	.	0	-	E	-	Q
Valve Type				Valve Configuration			Size		Seals		Coupling Type			

Type Connection	Valve Configuration	Size	Seals	Control	Coupling Type
EGPVE - CLAMP EPVE - WELD	Relief	1.5 2.0	EPDM - is the default V - Viton	1IPS - One Inductive Proximity Switch * 2IPS - Two Inductive Proximity Switch * (Proximity Switch Diameter 12mm)	Stem coupling - is the default Q - Quick Disconnect

* Optional By customer

** The preset relief pressure will be noted and secured on the actuator.

3A PVE Tank Bottom Valve

The Tank Bottom Valve is a pneumatically actuated single-seat valve designed to shut off fluid media at the base of vessels or tanks. It is commonly used in the dairy, food & beverage, pharmaceutical, and chemical industries.

Made from AISI 316L stainless steel and electro-polished, this valve ensures complete drainage of the tank, thereby optimizing CIP/SIP processes and maintaining high hygienic standards.

Key Advantages

- ✓ Easy and quick assembly/disassembly thanks to a one-piece valve structure.
- ✓ Zero dead leg design minimizes maintenance requirements.
- ✓ Engineered to ensure complete tank drainage.

Tank Bottom Valve Properties

- ✓ Operating pressure range: 2-7 bar
- ✓ Pneumatic opening pressure: Minimum 5 bar - Maximum 8 bar
- ✓ Materials of construction:
 - Actuator: AISI 304L stainless steel
 - Valve body: AISI 316L stainless steel
 - Gaskets: EPDM or Viton
- ✓ Internal surface finish: $\leq 32 \mu\text{m Ra}$

N/C or N/O operation mode in one actuator

3A PVE Control Top

FlowStar Control Top

The FlowStar Control Top has been specifically developed for seat valves as a custom-fit solution for our in-house single seat valves, providing enhanced efficiency and precision. It incorporates a proven contact-free position measurement system using a proximity switch.

Available models include 24 VDC and AS-i bus options.

Features

- ✓ Linear position measurement
- ✓ Contact-free sensing
- ✓ AS-i and direct I/O connection options
- ✓ Pneumatic 3/2 solenoid valve (manual operation available)
- ✓ Up to three configurable positions
- ✓ Fast and easy calibration
- ✓ Visual and electrical position feedback
- ✓ Circuit boards coated for corrosion resistance
- ✓ Safety device to protect against overpressure in the base housing
- ✓ Sealed connection for durability
- ✓ Quick and easy installation
- ✓ Compatible with all types and sizes of PVE valves
- ✓ Automatic control top color indication:
Green = Closed position, Amber = Open position

Green = Closed position, Amber = Open position

Structure

Electronic Module
Equipped with connection terminals, a service interface, and Teach buttons located on the rear side.

Solenoid valve V3* included.

Mechanical manual override with red lever on each solenoid valve.

Cable glands positioned on the rear lever.

Locking Grooves X3

Two shoulder screws (M5) used for locking. Provide protection against detachment from the adapter; they do not serve a sealing function.

Position Measuring System
Equipped with an LED indicator (device status LED / top LED).

Solenoid valve V1*

Solenoid valve V2*

Flow Restriction Screw(s)
Two screws per solenoid valve for ports P and R.

Sealing Lug - Hidden from view for secure sealing.

Connections:
Supply pressure connection (1/P)
Solenoid valve 2 connection (2/A2)
Solenoid valve 1 connection (2/A1)
Working connections (2/A1 to 3)

Exhaust air connection (3/R)
Additional Component Silencer for the exhaust air connection (3/R), not shown.

* Solenoid valves V2 and V3 - optional

Control Top Types

24VDC

- ✓ Direct I/O 24VDC valve controller
 - ✓ Integrated LED dome indicator (Green = Closed / Amber = Open)
 - ✓ Auto calibration feature for accurate position indication
 - ✓ Mounts on valve using a dedicated mounting kit
- Direct I/O Controller for Linear Valves (Spring Return)

Includes:

- Baseplate made of POM
- 3/2-way solenoid valve
- Transparent screw cover
- Auto calibration for position indication
- LED dome indicator
- 5-pin M12x1 connector
- Air connection for 6 mm air hose

ASI

- ✓ AS-Interface valve controller
 - ✓ Integrated LED dome indicator (Green = Closed / Amber = Open)
 - ✓ Auto calibration for precise position indication
 - ✓ Mounts on valve via dedicated mounting kit
 - ✓ Slave Profile: S-3/A.0.E
- AS-Interface Controller for Linear Valves (Spring Return)

Equipped with:

- Baseplate (POM)
- 3/2-way solenoid valve
- Transparent screw cover
- Auto calibration for position indication
- AS-Interface electronic module with LED dome
- 4-pin M12x1 connector
- Air connection for 6 mm air hose

I/O Link Headline

- ✓ IO-Link is a globally standardized IO technology (IEC 61131-9) designed for communication with sensors and actuators.
- ✓ It utilizes a point-to-point communication system with 3- or 5-conductor wiring for sensors and actuators, using unshielded standard sensor cables.
- ✓ The IO-Link control top is available in two variants:
 - Port Class A: Shared power supply (Power 1) for both the system and actuators (solenoid valves).
 - Port Class B: Separate power supplies—Power 1 for the system and Power 2 for actuators—allowing safety shutdown of the solenoid valves independently.

Current consumption:

- Port class A (supply of the system and actuators (solenoid valves) via Power 1)
- Port class B (system supply via Power 1, supply of actuators (solenoid valves) via Power 2)

Max. current consumption:

i.e. 2 solenoid valves active, 1 solenoid valve switches on (for 200 ms),
1 position feedback via LED display, no external proximity switch:

- Port class A (Power 1): <151 mA at 24 V DC
- Port class B (Power 1): <63 mA at 24 V DC
- Port class B (Power 2): <97 mA at 24 V DC

Current consumption in the persistent state:

i.e. 3 solenoid valves active, 1 position feedback via LED Display,
no external proximity switch:

- Port class A (Power 1): <138 mA at 24 V DC
- Port class B (Power 1): <63 mA at 24 V DC
- Port class B (Power 2): <84 mA at 24 V DC

Idle current:

i.e. no solenoid valve active, no position feedback via LED display, no
external proximity switch:

- Port class A (Power 1): <42 mA at 24 V DC
- Port class B (Power 1): <42 mA at 24 V DC
- Port class B (Power 2): <9 mA at 24 V DC
